July, 2014

# MMPDS Bottom Line

- The MMPDS Handbook is the primary source in the United States and many other countries of statistically-based, design allowable properties for metallic materials and fastened joints used by the commercial and military aerospace industries

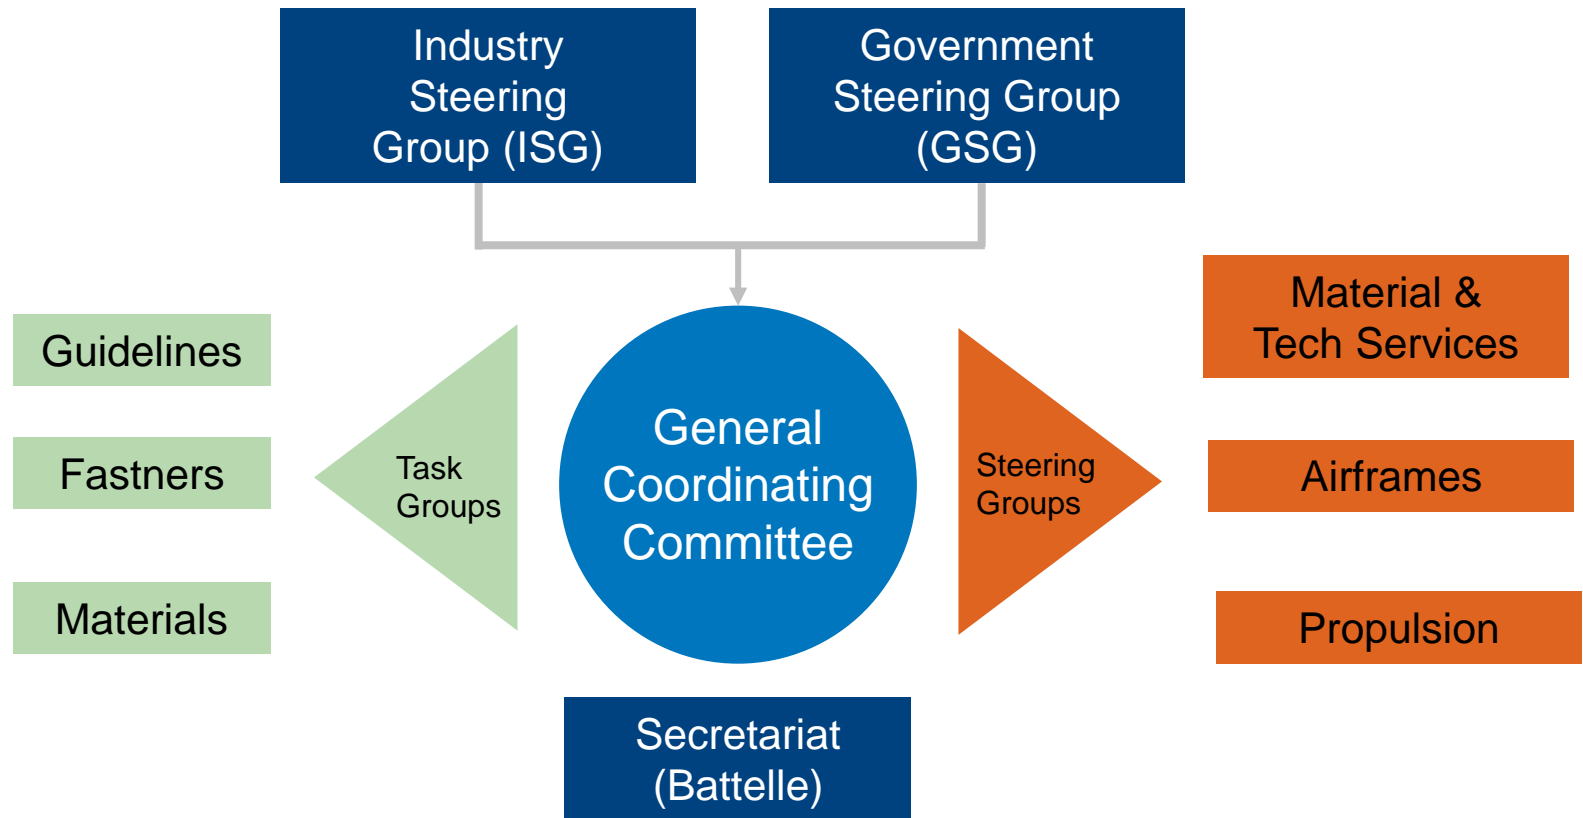

# Background

Date	Key MMPDS Program Events
1937	First publication of Army-Navy-Commerce Handbook 5 (ANC-5), which was “free issue”
1954	Proponency shifted to the Air Force; Battelle began functioning as the MMPDS Secretariat
1997	Industrial Steering Group (ISG) established to provide a source for increased partnership and additional sources of revenue via Handbook sales
2003	Federal Aviation Administration (FAA) assumed responsibility for performing government oversight and continues to exercise that function today

# MMPDS Overview

- Battelle serves as impartial data reviewer
  - All data is held company proprietary
  - Established statistical guidelines
- Recognized by the FAA, all Department of Defense (DoD) organizations and agencies, and the National Aeronautics and Space Administration (NASA) within the limitations of the certifications of the specific governments

# MMPDS Organizational Chart

# 2014 ISG Members\*

Metallic Material Producers or Technical Service Providers	Aircraft Producers (Metallic Material Users)
Alcoa	Airbus
Aleris Aluminum	Boeing
Allfast	Bombardier
Alro S.A.	Cessna
ATI Metals	Embraer
Aubert & Duval	Honeywell
Constellium	IHI Corp.
Granta Design	ITP Industries
Haynes International	Korea Aerospace
Kaiser Aluminum	Lockheed Martin Corp.
Magnesium Elektron	Lord Corp.
Materion Brush	Mitsubishi Heavy Ind.
QuesTek Innovations	Northrop Grumman
Universal Alloy	Rolls Royce
Weber Metals	Spirit Aerosystems
Westmoreland Labs	UTC Aerospace Systems

\* Member organizations headquartered in 9 different countries worldwide

# GSG Members

Current	Previous
FAA Navy	Air Force Army DLA NASA

MMPDS is recognized by FAA, DoD, NASA and other agencies for certification.

# Key MMPDS Program Value Propositions

- Standards definition
- Governance construct
- Homeland defense

**Table 3.2.2.0(b<sub>2</sub>). Design Mechanical and Physical Properties of 2014 Aluminum Alloy Sheet and Plate (Continued)**

Specification	AMS 4028 <sup>a</sup>							
	Sheet				Plate <sup>b</sup>

$\mu$	0.33				0.33			
<b>Physical Properties:</b>								
$\omega$ , lb/in. <sup>3</sup>	0.101							
C, K, and $\alpha$	See Figure 3.2.1.0							

<sup>a</sup> Inactive for new design.  
<sup>b</sup> Bearing values are "dry pin" values per Section 1.4.7.1.  
<sup>c</sup> Design allowables were based upon data obtained from testing samples of material, supplied in the O or F temper, which were heat treated to demonstrate response to heat treatment by suppliers. Properties obtained by the user may be lower than those listed if the material has been formed or otherwise cold or hot worked, particularly in the annealed temper, prior to solution heat treatment.

# MMPDS Handbook is the primary source of statistically-based, design allowable metallic properties and joints.

# MMPDS is a collaborative effort between industry and government with Battelle serving as secretariat

# MMPDS is vital to military and civil aerospace

- Consensus on design allowable properties and guidelines
- Cost saving collaboration
- Recognition for certification

# Summary

- MMPDS is a long-term, Battelle flagship program built upon a foundation of partnership with FAA, Navy, and other government agencies
- Industry funding support (31 companies from 8 countries) recognizes the key benefits of the program
